Putting kids first

By Robert Selleck, *today* Staff

■ Paul Casamassimo, DDS, the director of the AAPD's Health Policy Center, succinctly sums up the unique way AAPD serves its membership: It puts them second.

"Much of what our organization has accomplished has happened because we're fine with putting children ahead of our own profession," Casamassimo said Friday during a break from visiting with members in the AAPD Bookstore in the exhibit hall.

Casamassimo quickly listed several once-controversial oral-health guidelines for infants and

These Mouth Monsters are wondering what you think

By Robert Selleck, *today* Staff

■ Have you met Tartar the Terrible, Tooth D.K. and Ginger Bite-Us? If you have, what do you think of them? Are you putting them to use in your practice?

AAPD staff is interested in getting your opinion about the effectiveness of the Monster-Free Mouths Movement educational campaign that launched last year – and would like to gauge interest in various support products available in conjunction with the

campaign. If you have a minute this morning, stop by the AAPD Bookstore in the exhibit hall, booth No. 517, to offer your thoughts and answer a few survey questions about the campaign.

Mark Urbach, DDS, in practice with his son in Houston, came straight to the point in the booth Saturday: "I love the Mouth Monsters. It's exactly what we were looking for. We're using it in our office big time."

Jennifer Culley, DMD, with Dentistry for Special People in Cherry Hills, N.J., had a similar opinion. "Kids

love them," she said. "It makes it easier to talk with them. They're fun. They're a good tool."

The primary intent of the campaign is to work toward ending tooth decay's status as the No. 1 chronic infectious disease among children in the United States. The main components are education and fun.

Anchoring the effort is www.MyChildrensTeeth.org, which is filled with tips and tools that can be used to teach children about teeth in a way that gets their attention.

KIDS *from page 1*

children that were long-advocated by AAPD but slow to be embraced by other dental organizations despite the evidence backing the recommendations.

“What was once in askance is now universally accepted as the standard,” Casamassimo said. “We’re very proud of that as an organization. The accomplishments reflect where we direct our energy: No. 1 is advocacy for children. No. 2 is to serve our membership.”

The philosophy works, apparently, because so many member dentists embrace the same perspective with their own business models.

The scientific program at this year’s AAPD annual session further confirms the perspective, with wide-

ranging topics focused on improving oral health for all children.

The philosophy is reflected throughout the exhibit hall, too, with countless products and services directed primarily toward improving patients’ comfort and care – with practice efficiencies and profitability typically referenced as secondary benefits.

Examples are endless. Isolite, in booth No. 810, is here with its recently launched “extra-small” mouthpiece for its dental-isolation system, complementing the five other existing sizes, which already included “pediatric” and “small.” Many dentists find younger patients far more receptive to the system than traditional isolation methods.

NuSmile, in booth No. 405, a leader in esthetic pediatric crown advance-

ments, continues to innovate with products focused on patient success and comfort.

StarBright, a relatively new varnish from Nanova Biomaterials, in booth No. 833, is gaining fans with its flavored sodium fluoride varnish because young patients are able to brush normally just four hours after application, instead of having to wait as long as 24 hours. Baby Buddy, in booth No. 925, has an oral-care program for children from birth through age 12 and beyond, with different systems at every stage of development.

Every row of the exhibit hall features plenty of other products and services reflecting their founders’ commitment to children’s oral health. And there is still more time today to explore, with the exhibit hall open from 9 a.m. to noon.

Smiles ahead.

For the past 24 years we've helped pediatric dentists deliver over 4 million smiles – more than all of our competitors combined. You get ahead by being proactive, anticipating customers' needs and doing whatever it takes to keep patients smiling.

Thank you for your business. We will continue to go the extra mile to ensure there are plenty of smiles ahead.

"I use NuSmile Signature Crowns exclusively. The crowns look great, which really pleases the parents of my little patients. The fit and size options make placing the crowns fast and predictable, and the durability of the veneered crowns keeps me coming back. When I'm working on restoring a smile, I use what I trust. Thank you NuSmile."

Corban Stettler, DDS
Kids Rock Pediatric Dentistry, Colorado Springs, CO

"I love how great the NuSmile ZR looks on patients 2 years post-op and on. Nothing else I've used retains their color and shape anywhere close to the ZR crowns. If any child in my family needed crowns, I would use ZR crowns!"

Hiren Patel, DDS
Jet Set Smiles, Phoenix, AZ

"NuSmile ZR crowns are the third zirconia system I've tried. They are definitely the easiest to fit thanks to the Try-In crowns. The retention of the crowns is superior, as the cemented crowns never interact with the oral environment."

Lawrence Dinkes, DDS
Commerce Park Children's Dentistry & Orthodontics, Bridgeport, CT

AAPD BOOTH

Next generation software for next generation pediatric dentistry

MacPractice DDS is the premier dental software developed for Macs. MacPractice integrates into your life and work interoperating with apps for iPad and iPhone and utilizing newly integrated online services your patients and staff will love, and next generation charting and integrated digital imaging you will love.

Your practice management and clinical software should enable you to run your practice effectively and affordably with confidence.

With Apple's legendary reliability, ease of use, and minimal onsite maintenance cost, MacPractice features abilities not available in other, older software programs. Quite simply, MacPractice is better software, created, developed and supported by an actual software company with real engineers, programmers and developers.

MacPractice is built for the future... your future!

The Industry's #1 Digital Panoramic X-ray

ProMax S3 Pediatric Extraoral Bitewing

ProMax S3 Pediatric Standard Panoramic

ProMax® S3 WHAT IF... You Could Do ALL Your Routine Imaging Extraorally?

- Extraoral bitewings capture a greater number of surfaces for better caries detection versus intraoral modalities*
- Anatomically Accurate Extraoral Bitewing program for enhances patient comfort and eliminates gagging, especially for pediatric patients.
- Pediatric panoramic program reduces radiation by up to 35%
- Horizontal/vertical segmentation limits radiation to areas of interest, reducing dose by up to 90% compared to a panoramic exposure
- Open-architecture Planmeca Romexis software included
- Fully upgradable to 3D and cephalometric capabilities
- Open design for simple, face-to-face patient positioning

*According to "Efficacy of ProMax Bitewings vs. Intraoral Bitewings." For a copy of this study, please contact Planmeca USA.

Everything you need for zirconia crowns

NuSmile's complete system contains crowns, try-in crowns, cement and burs

By NuSmile Staff

Several companies make pediatric zirconia crowns. Even more make luting cements that can be used with zirconia, and a comparable number make the burs used for preparation and adjustment. One company, however, has the technical expertise,

Here in Seattle

To learn more about the complete zirconia crown system, stop by the NuSmile booth, No. 405.

customer-centered orientation and research commitment to develop a complete zirconia crown system for pediatric dentistry.

As one of the world's largest manufacturers of preformed esthetic pediatric crowns, NuSmile has had many customers ask which cement works most effectively with its crowns.

"In order to provide the best recommendation possible, we studied the latest developments in cement chemistry intensely," said Mark Binford, NuSmile's senior vice president of new product development. "We determined that the science was moving toward advanced bioactive materials, but we couldn't find a cement that met all of our customers' criteria."

So NuSmile did what a true leader would do: it developed its own bioactive cement, making it the only company, according to NuSmile, to offer both preformed pediatric zirconia crowns and a cement that is specifically formulated for them. This

(Photo/Provided by NuSmile)

cement – BioCem Universal Bioactive Cement – is said to deliver great bond strength and is the only cement that releases phosphate, calcium and fluoride ions into the oral environment while also forming hydroxyapatite, which is available to integrate with and replenish the tooth underneath the crown.

But if NuSmile was going to have a truly complete zirconia crown solution, it also needed to address the No. 1 problem that was being ignored by others: saliva contamination. According to the company, saliva contamination occurs 100 percent of the time when the zirconia crown is placed on the tooth during the trial fit stage, and it can significantly impair crown retention.

Independent research has proven that saliva contamination dramatically reduces bond strength and that simply rinsing the zirconia crown with water, isopropanol or even phosphoric acid after the trial fit is ineffective. The only known effective cleaning methods rob clinicians of valuable time, effecting practice productivity and profitability.

NuSmile's solution, invented by NuSmile CEO Diane Johnson Krueger, a 35-year veteran in the dental medical-device industry, provides a practical, science-based solution that gets to the heart of the issue. Try-in crowns eliminate the need to place the actual zirconia crown in the mouth prior to cementation, thus completely avoiding saliva contamination. NuSmile ZR zirconia crown kits include these pink autoclavable zirconia try-in crowns at no additional charge.

Independent research commissioned by NuSmile indicates 80 percent of zirconia crown users consider it important to prevent saliva contamination, while 83 percent are interested in a complete system including zirconia crowns, try-in crowns, cement and burs.

"We have always prided ourselves on keeping our ear to the ground to understand what pediatric dentists need that no one else is giving them," Krueger said. "Our exclusive complete zirconia crown system, now offered in our NuSmile smart bundle, is just the latest example of how NuSmile is leading by listening."
