Options galore

A bird's eye view of the exhibit hall on Thursday afternoon. Photos/Robin Goodman, Dental Tribune

By Robin Goodman, Dental Tribune

It was a quiet start in the exhibit hall on Thursday when the doors opened at 9:30 a.m. Where was everyone? Well, at the morning lectures, of course! And as expected, after the lectures concluded around 11 a.m., the exhibit hall began to fill up with attendees seeking new products, equipment and some lunch.

Of the first two, there was certainly no shortage as some 450-plus exhibitors were ready to answer questions and demonstrate their wares, all of which are good places to check out today.

A good place to start one's peregrination through the exhibit is at H&O Dental Laboratory. Take a minute to fill out a questionnaire about the laboratories you currently use and your experience with them and receive a \$5 Starbucks gift card.

Next, slide over to the DentalSubs.com

► See OPTIONS, page 2

High Tech Playground equals no sales pressure

Dr. Paul Feuerstein is the force behind the High Tech Playground booth (No. 2634), which is a "no sales zone" for those who wish to learn more about the 65 products that are found in the booth. Feuerstein will deliver nine lectures over three days, with Scott Benjamin delivering two focused on lasers. The playground is a larger version of the one that occurred at last year's meeting.

Visit the playground today for an introduction to PhotoOral, a new handheld consumer device that combats plaque to improve oral health. The device uses BlueLight™ to combat gum disease.

Innovative. Simple. Smart.

AD

Need a job? Need an employee? Check out www.dentalsubs.com to find either. You can also stop by the booth (No. 1040) where Richard Garofolo and Lindsey Sadler will be happy to explain all.

← OPTIONS, Page 1

booth, where you can find a temporary or permanent job or employee.

If you are looking for a job, you can search by a number of criteria, such as availability, pay rate, distance and even software familiarity. Job seekers can create a profile to highlight their skills so hiring managers can find them. Such profiles are appropriate for recent graduates as well as dentists, hygienists, dental assistants, front desk staff and office managers.

Happy feet are an important part of a successful workday. If you want some of the best daylong comfort shoes, skip over to the Dansko by Alexander's Uniforms booth (No. 1284) and pick out one of the many pairs to try on.

Sizing is European, but any member of the booth staff can help you convert from your American size. With a variety of styles and colors, you'll likely find more than one pair that finds favor in your site. And given the 20 percent discount for the Yankee show, your pocketbook won't feel so light but we guarantee your feet will.

If you are already placing implants or just getting started, swing by the BTI Implants booth (No. 2319) to learn more about the company's grafting system and its biotech approach for implants. The BTI brand hails from Spain, and its Biotechnology Institute focuses on research, development and innovation, which are implemented from a biological focus of medicine that enables the provision of new and personalized therapeutic solutions with a clear clinical application.

The exhibit hall is open until 5:30 p.m. today and 4:30 p.m. on Saturday. Be sure to set aside extra time for a leisurely stroll through the aisles to find the new products and companies you may not yet be aware of; you'll be glad you did.

Comfy feet are happy feet, and if you need a pair of shoes, swing by the Dansko booth (No. 1248) to find a style that suits you.

Tony Huertas, from left, Jocelyn Jacques and Mark Tetreault, CDT, at the H&O Dental Laboratory booth (No. 812) are interested in learning about which dental labs you use and your experiences there. If you take a few moments to fill out a questionnaire, you'll get a \$5 Starbucks gift card.

At the BTI Implants booth (No. 2319), Stephanie Correal and Geraldine Duffy can tell you about the company's grafting system as well as its biotech approach for implants. Duffy teaches residents about bone and tissue grafts at Tufts and Boston Universities.

Learn the best endo tricks and techniques

By L. Stephen Buchanan,
DDS, FICD, FACD

Welcome to Friday at the Yankee Dental Congress. Today is a fun day for me because I will be lecturing this morning and again in the afternoon. I'll begin by

covering how to get your patients profoundly numb — in every case, in very little time. I'll also discuss a long overdue trend I started years ago: making more conservative access cavities without forsaking convenience form. The loss of structural integrity is the No. 1 complaint

prosthodontists have about using endodontically treated teeth as abutments for complex full-mouth restorative cases.

The morning will finish with another exciting trend in root canal therapy (RCT): rotary instruments for initial negotiation — often the only files you

Here at Yankee

L. Stephen Buchanan, DDS, FICD, FACD, will present "The Art of Endodontics: Anesthesia, Access and Negotiation" from 8–11 a.m. today in room 107B. He will then present "The Art of Endodontics: Shaping, Cleaning and Obturation" from 1–4 p.m. in room 107B. Each course costs \$90.

will use before shaping the canal. I'll discuss what you should use and when you should go back to standard K-files or a combination of the two. I will cover all the challenges you will face in negotiating root canals and teach you all the tricks to assure you never block yourself from getting to full length. I will also go over how to manage all the different types of impediments you may encounter in clinical practice.

This afternoon, I will continue on topics of conventional RCT, including creating smaller coronal shapes, cleaning efficacy and what should be the new standard in obturation. You will learn proper file selection for all root forms and learn to carve very efficient, predictable and reproducible shapes using safe but rapid cutting files, often with only one to three files. The goal of shaping is to make room for the irrigants to kill the bugs, and if you cheat this aspect of RCT, you will cheat your patients and your success rate. There are many new methods for doing this, and I will review my cleaning protocol. Finally, I will discuss the importance of warm, centered condensation filling techniques that are truly state-of-art.

My objective is to share all my best endo tricks and techniques in a manner that will allow their application next week in your practices.

I'll see you at the apex!

About the author

L. STEPHEN BUCHANAN, DDS, FICD, FACD, completed the endodontic graduate program at Temple University in Philadelphia in 1980. In 1989, he established Dental Education Laboratories, through which he has lectured and conducted participation courses around the world, published numerous articles and produced a video series, "The Art of Endodontics." He is a diplomate of the American Board of Endodontics and a fellow of the International and American Colleges of Dentistry. He also serves as an assistant clinical professor at the University of Southern California School of Dentistry and at the University of California, Los Angeles School of Dentistry. He maintains a private practice limited to endodontics and implant surgery in Santa Barbara, Calif. Buchanan can be reached through his company, Dental Education Laboratories, at www.endobuchanan.com, info@endobuchanan.com or by calling (805) 899-4529.

You know how important photographs are to your practice, but you don't know who to turn to for advice. PhotoMed understands your **needs** and can help you choose the right camera. We also include **a** support and loan equipment program for the life of the camera so you have someone to turn to if you have questions.

PhotoMed dental cameras feature the best digital camera equipment available. The Canon G12, Rebel T3 and T3i are great choices.

Choosing a quality **dental** system for your practice doesn't have to be difficult. Call the experts at PhotoMed and we'll help you with all of your **camera** questions.

An LVI regional event will be held in New Orleans on March 9 and 10.

Photo/Provided by www.sxc.hu

Have LVI bring its educational program to you

By LVI Staff

Feel like you are stuck in a rut? Need a change? Having a hard time getting things going with all the worry about the economy? This could be your golden

Contact

For even more information, visit www.LVIRegionalEvents.com.

opportunity to “regain control” of your practice and recapture your passion for dentistry.

Think about attending a Las Vegas Institute for Advanced Dental Studies (LVI) Regional Event. You have the opportunity to discover a path that will lead you to both personal and professional satisfaction.

As a dentist, you have probably heard about LVI and considered taking a course but simply cannot justify spending the money or taking the trouble to bring a patient all the way to Las Vegas to find out what LVI is all about.

This is the best time to attend one of our regional events, especially if you are feeling bored with the same thing every day or feel stuck with the old way of doing things and just can't seem to get out of the rut you are in.

LVI's one- and two-day regional events are designed to share with the participants a more professionally satisfying and profitable way to practice dentistry. You will receive valuable information about LVI's esthetic and occlusal philosophies, which are revolutionizing our profession.

Among the many exciting things you will learn during the course of the meeting is how to create a golden age of dentistry in your own office, how to take a T.E.N.S. Bite for optimal position to restore your cases and how to turn your patients into guests and make it easier for them to accept comprehensive treatment.

You will also hear from one of our experienced LVI regional directors about his or her personal journey and how you can create one, too.

By attending a regional event, you will have taken the first step where you will find the opportunities boundless for you and your patients, whose lives will change for the better. Regional events are held throughout the year in different locations throughout the United States and Canada, so go to www.lvi-regionalevents.com to find your opportunity to attend.

This experience will give you tools to make a better income and afford better equipment, and while that is great, the most important thing it will do is allow you to deliver a better quality of care and a higher quality of living for your patients.

It is time for you to learn first-hand what LVI is all about and, once you have experienced it, enjoy the benefits of your education and training.

No interface degradation? It must be Ceramir Crown & Bridge

By Robin Goodman, Dental Tribune

Permanent and stable are words that bring peace of mind to many. Now, Doxa Dental brings this peace of mind to the dental office with Ceramir Crown & Bridge, a new bioceramic luting cement. You might wonder, "How can a new luting cement be any different than what is already out there?"

One difference is that Ceramir® has the unique ability to make tight and impermeable contact with tooth tissue that is stable over the long term. In fact, no cement is closer to natural tooth structure than Ceramir. This is because Ceramir fosters a build-up of nano-crystals that integrate with dentin and enamel, forming a biomimetic material that the company calls "nanostructurally integrating bioceramics" (NIB). The transmission electron microscope images, showing how at 20 nm (the molecular level) Ceramir integrates with enamel in vivo, are quite compelling and can be seen at the booth (No. 1938).

Another dramatic difference in comparison to other cements is that Ceramir creates an alkaline environment (high pH) that resists acid and bacterial decay. Thus, the product remains chemically stable in the oral environment over time. Because it was designed to be stable in an oral environment, Ceramir does not require optimal conditions for a good seal.

The questions on everyone's mind when discussing dental cement usually revolve around working time, setting time, film thickness and mechanical strength. Ceramir's working time is two minutes while its setting time is approximately five minutes. In addition, Ceramir meets the film thickness for well-fitting restorations by coming in at around 15 µm. Finally, Ceramir's mechanical strength was measured in terms of compression strength and, after 24 hours, was measured at 170 MPa.

Recall data from a two-year clinical study confirms that Ceramir Crown & Bridge demonstrates outstanding effectiveness with 0 percent sensitivity, 100 percent retention, 100 percent marginal integrity, 0 percent marginal discoloration and 0 percent secondary caries.

Ceramir Crown & Bridge is now available as Ceramir Crown & Bridge Singlecap and Ceramir Crown & Bridge Doublecap. Ceramir Crown & Bridge Singlecap is specifically designed for single unit restorations and eliminates waste while the original doublecap is still available for multiple unit restorations.

Ceramir Crown & Bridge cement is
