International dental community meets in Dubai

AEEDC extends scientific programme in 2011—Over 20,000 dentists expected to attend

■ The UAE International Dental Conference & Arab Dental Exhibition (AEEDC) is welcoming dental professionals from all over the world to the city of Dubai. During 1–3 March, general practitioners, specialists and auxiliaries will have the opportunity to bring themselves up-to-date with the latest products and technologies in the field of dentistry. The organiser has announced that the focus of this year's congress will be on practice management and CAD/CAM restorations. In addition, it will host a variety of courses, symposia and forums on topics like oral traumatology, prevention, periodontology and implants.

Participants will be able to earn up to 49 credit hours during the congress which has recently been recognised as ADA CERP provider—a service of the American Dental Association to

Photo: Losevsky Pavel

assist dental professionals in identifying quality providers of continuing dental education.

Patronized by H.H. Sheikh Hamdan Bin Rashid Al Maktoum, Deputy Ruler of Dubai, Minister of Finance and President of the Dubai Health Authority, AEEDC has recently be-

come the largest dental meeting in the combined Cooperation Council for the Arab States of the Gulf (GCC) and Middle East and North Africa (MENA) regions. According to figures of the organiser, last year's event saw over 20,000 dental professionals and trade visitors attending the congress in early

March. With a turnover of US\$1 billion the event also contributes significantly to the UAE economy.

Dr. Nasser Malik, Chairman of AEEDC Dubai Conference said: "We are expecting more than 20,000 participating dentists from the region and different parts of the world, therefore, the AEEDC Scientific Advisory Committee and with the support of the Dubai Health Authority prepared a full three days schedule, where dentists and students can receive the maximum benefit for their clinical practice. The programme is comprehensive and features the latest ad-

vances and research in the various specialties of dentistry. It will be a platform where most eminent speakers from around the globe will share their expertise with our audience."

Malik added that for the second consecutive year, the scientific committee will be presenting the GCC Preventive Dentistry Conference. A symposium of the International Association of Dental Traumatology will be also held for the first time. In addition, there are more activities taking place such as the AEEDC Dubai Awards, a student competition, as well as poster and oral presentations, he said.

For more information please visit the website www.aeedc.com.

Biomaterials and implants stimulate global demand for dental products

■ The increasing demand for dental biomaterial and implants is driving the global dental equipment and consumables market. According to a report released by US market research company Marketsand-

Markets last month, both segments are expected to grow at a compound annual growth rate of 6 per cent—only slightly below the 7 per cent growth rate predicted for all market segments combined. Total market

volume is forecasted to reach US\$27.6 billion by 2015.

According to the report, the growth of these segments is expected to be highest in North America and the EU, where the generation of ageing baby boomers can afford high-priced dental procedures, including cosmetic treatments and implants. Improved orthodontic products are also in high demand, especially by younger people.

Improvements in the field of dental biomaterials and tissue regenerative material have enabled dentists to offer more natural and long-term dental solutions. The latest technology, such as CAD/CAM, reduces the overall turnaround time for dental procedures, while improving efficiency of dental practitioners further, the report states.

AEEDC—An opportunity to discuss the latest advances in dentistry

A welcome message by Qadhi Saeed Al Murooshid, Director-General of AEEDC Dubai

■ On behalf of the Dubai Health Authority (DHA), I would like to welcome you to the 15th edition of the UAE International Dental Conference and Arab Dental Exhibition (AEEDC).

Over the past few years, our Emirate has emerged as a major business and medical hub in the combined Middle East and North Africa markets through its strategic location and keenness to excel in all fields. At our organisation, hosting, attending and speaking at conferences such as the AEEDC is part of a broader strategic vision. Being the principle health authority for the Emirate of Dubai, we also understand the importance of such conferences, which tries to bring together the very best in

international and local talent. Every year thousands of visitors come to Dubai to take part in such events.

AEEDC, in particular, has become one of the biggest in

the region and we are proud to be able to host it in Dubai. The conference is a platform where, amongst other healthcare professionals, international speakers from dental fields such as endodontics or paedodontics will get an opportunity to discuss the latest advances in dentistry. The highlight of this congress is that eminent healthcare professionals from around the world will be joining us and speaking at the congress.

I look forward to your participation!

Qadhi Saeed Al Murooshid
Director-General of AEEDC
Dubai

AEEDC is one of the regions most reliable congresses

Welcome Message by Dr. Tariq Khoory, Director of the Dubai Dental Centre and Honorary Chairman of AEEDC Dubai

■ It gives me great pleasure to see that the UAE International Dental Conference and Arab Dental Exhibition is not only recognised to be one of the regions most reliable congresses but also considered to be an iconic meeting for Continuing Education in dentistry. Over the past 14 years, the meeting has emerged from a local specialised meeting to a global forum where dentists from all over the world convene to share their research and experiences while grasping the pulse of the dental industry.

AEEDC Dubai does not only offer quality dental programmes but has also shown to be able to initiate a learning process in the dental fraternity, which is helping General Practitioners to upgrade their existing skills and knowledge in the long run, encouraging them to interact with their peers and de-

veloping a creative niche for Oral Health Development.

Dental companies who will exhibit at AEEDC 2010 are keenly looking forward to participate in this annual gathering that provides a perfect platform to showcase all their modern dental technologies and products. AEEDC Dubai also fosters the relationship between end users and suppliers while providing dealers or manufactur-

ers with an opportunity to address the expectations from their clientele with their available services. AEEDC Dubai will host exhibitors from all around the world that will have the chance to engage in new long term business collaborations.

Having played an important role of this meeting for years myself, I would like to take this opportunity to extend a cordial welcome to all dentists, manufacturers, dental academia, private clinics, laboratories, and our distinguished guests, to be a part of AEEDC Dubai 2011, as well as contribute to its ongoing success.

I wish you a very pleasant stay in Dubai and a fruitful meeting!

Dr Tariq Khoory
Honorary Chairman of AEEDC
Dubai

At the forefront of the international dental industry

Abdul Salam Al Madani, Executive Chairman AEEDC Dubai and President of INDEX Holding

■ It is an immense honour for me to announce the 15th edition of the region's most dynamic dental meeting.

The UAE International Dental Conference and Arab Dental Exhibition 2010 will be held from 1-3 February, 2010, at the Dubai International Convention and Exhibition Center. It has always played a pivotal role in attracting the dental industry and its specialties that are prevalent in the region. Recently, the event has also reached out to the international dental community through its Continuing Educational programmes in a very efficient manner and is now at the forefront of the international dental industry.

An important topic this year will be dental trauma, which derives from an active collaboration with the International As-

sociation of Dental Trauma. This organisation will provide a special feature at the conference that will round off this year's regular schedule of courses, lectures and symposia.

In addition, the exhibition will promote the new dental technologies and innovations, as well as see the participation of new countries.

We invite participants, exhibitors, guests and supporters to three days of clinical and scientific enrichment in the wonderful city of Dubai.

- Higher Treatment Acceptance Rates = Increased Profitability
- Takes the Guess Work Out of Dentistry

"When we began looking at cone beam systems, medical CT scans were our gold standard. After several months of evaluating various systems, the PreXion 3D CBCT was the only one that provided us with the same high quality images as a medical CT, with much less radiation. That truly was the deciding factor in our purchase decision."

GI restorations equally successful to amalgam

■ A method used in developing countries to restore dental cavities can be a viable alternative for conventional tooth restorations, scientists from Johannesburg in South Africa are reporting. In a systematic review involving clinical studies from China and the Middle East, they found that survival rates of restorations using the so-called Atraumatic Restorative Treatment (ART) are comparable and to some extent superior to those placed with amalgam.

Developed in Africa in the mid-80s, ART is a clinical procedure based on removing carious enamel and dentine using hand instruments only and restoring the tooth with an adhesive filling material such as glass-ionomer (GI). It is said to be painless and require minimal cavity

preparation while conserving sound tooth tissue.

The World Health Organization currently recommends the procedure for application in developing countries with limited resources for treatment as well as elderly and patients with special needs in developed countries.

In the new review, the researchers from the University of Witsrand in Johannesburg compared 27 datasets of ART restorations with amalgam fillings in Class I, II and V cavities of primary and permanent teeth from clinics in Kuwait, Syria and China. Most of them did not show a difference between the success rates of ART and amalgam restorations, they said. In fact, four comparisons were even in favour of the procedure. They recommended to verify the findings through more randomized control trials, as the studies observed were done under unclear randomized sequence allocation.

According to WHO figures, caries prevalence in developing countries is still high despite preventative measures such as water fluoridation and improved school-based dental hygiene education.

Scientists link dental X-rays to cancer

■ LONDON, UK/LEIPZIG, Germany: A joint research team from Kuwait and the UK has reported a link between dental X-rays and increased numbers of thyroid cancer. After factoring X-rays taken of 300 patients in a hospital in Kuwait, they found that men and women who had had up to four dental X-rays were more than twice as likely to have developed the disease than those who had never had any dental X-rays. For those patients who had had between five and nine X-rays, their risk rose more than four-fold.

Although thyroid cancer is one of the least deadliest cancers, incident rates have almost doubled in countries like Australia in recent years.

The findings are consistent with previous reports of increased risk of thyroid cancer in dentists, dental assistants, technicians and X-ray workers, suggesting that sensitivity of the thyroid to radiation is not necessarily related to direct irradiation of that organ but to any exposure to ionizing radiation. Besides thyroid cancer, significant risks have been also observed for leukaemia and cancers of the breast.

The researchers warned that the results of their study "should be treated with caution" because the data was based on self-reporting by the participants and the fact that other factors could be contributing to the increase in thyroid cancer cases. Further research is required to confirm the exact effect of dental X-rays, they added.

"It is important that our study is repeated with information from dental records, including frequency of X-rays, age and dose at exposure," Dr Anjum Memon, Senior Lecturer and consultant in Public Health Medicine at Brighton and Sussex Medical School, who led the study, said. "If the results are confirmed, then the use of X-rays as a necessary part of evaluation for new patients, and routine periodic dental radiography, particularly for children and adolescents, will need to be reconsidered, as will a greater use of lead collar protection."

Sex virus to save from death through oral cancer

■ Patients who suffer from certain types of head and neck cancer are more likely to survive following treatment if the tumor was caused by a papillomavirus (HPV), scientists from the University of Sydney in Australia report. According to their research published in the latest issue of the British Journal of Cancer, patients with HPV positive tumours of tonsil and base of the tongue are four times less likely to die than patients whose cancers did not follow a HPV infection.

Furthermore, the cancer was three times less likely to recur at the primary site in patients with HPV positive cancers.

The scientists examined 198 Australians with advanced oropharyngeal cancer for an average of two years. The patients had received surgery or radiotherapy for the disease. Dr Angela Hong, lead author from the University of Sydney, said: "The beneficial HPV effect was seen regardless of the type of treatment they had. Various clinical trials are now in development to tailor treatment according to HPV status of tumours."

Dr Lesley Walker, director of information at Cancer Research UK, predicts beneficial effects on prospective treatments: "It's possible that, in the future, patients with HPV positive can-

cers may be able to have less intensive forms of treatment which would reduce the side effects of therapy."

"In addition to its role in cancer of the oropharynx, HPV causes most if not all cervical cancer and increases the risk of cancer of the vagina, penis and anus", she adds.

HPV is spread through all types of close sexual contact, however, the use of condoms and vaccination reduces the risk of infection, expert say. Smoking and drinking alcohol are other factors to increase the chance of developing head and neck cancer.

New evidence shows mercury to drive Alzheimer's

■ Earlier studies of low-dose human exposure, such as to dentists and their staff, have shown that exposure to mercury is correlated with long-term neuro-

logical or psychological harm. The new review is one of the first that tried to find a systematic link between memory deficits and increased levels of mercury found in Alzheimer patients.

According to Professor Harald Walach, PhD, Viadrina European University in Frankfurt

(Oder), patients with silver fillings are exposed to 1–22 µg mercury per day of which the majority accumulates inside the brain. The metal binds with selenium, a substance responsible for preventing oxidative stress which can lead to cell death and early aging, he added. Removing mercury from medical and ecological cycles could

slow down cell death and prevent the development of dementia and possibly other forms of neurological disorders including Parkinson.

"The situation is similar to the early 1970's regarding smoking: substantial experimental evidence existed, but human studies were inconclusive at the time and were under attack by groups with a vested interest," Walach told *Dental Tribune ONLINE*. "To wait until irrefutable evidence has accumulated is not the best option in view of what we already know about the toxicity of mercury."

Amalgam is still the most common type of fillings used by dentists worldwide. It is only banned in Sweden and restricted in Norway and Denmark.

Nano coating raises hopes in fighting antibiotic resistance

■ The emergence of antibiotic resistant bacteria is becoming a major problem in the fight against hospital-related infections. Researchers from New York and Albany in the United States have now reported the successful testing of a new nanoscale coating that can be used for surgical equipment or hospital walls and kills even super-resistant bugs like Methicillin-resistant *Staphylococcus aureus* (MRSA) within 20 minutes of contact.

MRSA is a bacteria-strain usually found on the skin and sometimes nasal passages of healthy people from where it can find its way into the body through cuts or healthcare-related equipment like catheters and breathing tubes. Infections

caused by MRSA are difficult to treat because they do not respond to antibiotics used to treat staph infections such as penicillin or cephalosporin. In countries like the UK, more than 1,000 patients die of MRSA-related infections per year.

The new coating, which is based on a natural enzyme called lysostaphin, can be used with any type of surface furnishes the researchers said. In a field test, they mixed it with ordinary latex house paint, which was used to paint a number of walls in the Albany Medical College. They found that lysostaphin, which is only toxic to MRSA, works by first attaching itself to the bacterial cell wall and then kills it by slicing it open.

"It's very effective. If you put a tiny amount of lysostaphin in a solution with *Staphylococcus aureus*, you'll see the bacteria die almost immediately," said Ravi Kane, a professor in the Department of Chemical and Biological Engineering at the Rensselaer Polytechnic Institute in Troy, New York. "At the end of the day, we have a very selective agent that can be used in a wide range of environments—paints, coating, medical instruments, door knobs, surgical masks—and it's active and it's stable."

Kane added that the coating has a dry storage shelf life of up to six months and can be washed repeatedly without losing effectiveness.

“Delivering Science & Technology”

AEEDC Dubai 2011 Conference Programme, 1–3 February, 2011

Tuesday, 1 February, 2011

AEEDC Conference Hall (Sponsored by Listerine)

9:30–10:15

Integration of the TenBrook T1 Passive Self-Ligating Bracket System into an Established Orthodontic Practice.
Speaker: Robert Brewka

10:15–11:00

Smart Mechanics: Make the Prescription work for you.
Speaker: Sasil Poonen

11:15–11:45

Soft tissue Periodontal considerations enhance function and aesthetics for your patient
Speaker: Yasser Khabbaz

11:45–12:45

Antiseptic Mouthrinses:
Impact on Health
Speaker: Sebastian G. Ciancio

2:00–3:00

Peri-implant Mucositis/Implantitis:
A Periodontal Perspective
Speaker: Sebastian G. Ciancio

3:00–4:00

How to avoid implant esthetics nightmares
Speaker: Home Lay Wang

4:00–5:00

Regeneration in Periodontics and Endodontics
Speaker: Khalid Al Hezaimi

5:00–5:30

Zirconium-Technological possibilities, limitations and solutions
Speaker: Ihsan Al Hamadi

AEEDC Conference Hall IADT Symposium in Oral Traumatology

9:30–10:15

Wound healing subsequent to injury
Speaker: Jens O. Andreasen

10:15–11:00

Treatment of crown fractures and how to optimize esthetics in anterior region
Speaker: Hani F. Ounsi

11:15–11:45

Luxation and tooth avulsion
Speaker: Jens O. Andreasen

11:45–12:45

Revascularization of the pulp after trauma
Speaker: Asgeir Sigurdsson

2:00–2:45

Pulpal complications and infection-related root resorption
Speaker: Leif K. Bakland

2:45–3:30

MTA in dental traumatology
Speaker: Leif K. Bakland

3:30–4:15

Dentoalveolar ankylosis and its management
Speaker: Barbro Malmgren

4:15–5:00

Orthodontic considerations in trauma patients
Speaker: Roy Sabri

5:00–5:30

Modern treatment principles of maxillofacial fractures
Speaker: Said Halab

AEEDC Conference Hall (Sponsored by Pierre Fabre Oral Care)

9:30–10:15

Treatment of Gingival Recessions
Speaker: Axel Berens

10:15–11:00

The current concepts of the treatment of gingival recession
Speaker: Zameera Mohammed

11:15–12:00

Occupational exposures in dentistry and post-exposure management
Speaker: Kathy Eklund

12:00–12:45

Functional Posterior Restorations—Achieving Superior Clinical Outcomes with Smart Dentine Replacement Technology
Speaker: Thomas Attin

2:00–2:45

Diagnosis and Treatment of Peri-Implant Diseases
Speaker: Stefan Renvert

2:45–3:30

The Duet of Implants and Aesthetics Depend on Occlusal Harmony
Speaker: Chris Mei

3:30–4:10

Control of the High Angle Malocclusion
Speaker: Derek Mahony

4:10–5:30

Iniscrews in orthodontics 2010—state of the art
Speakers: Axel Berens & Dirk Wiechmann

AEEDC Conference Hall (Sponsored by Colgate)

9:30–10:30

New Technology and Injections Techniques for Delivery of Local Anesthesia to Pediatric Patients
Speaker: Eugene R. Casagrande

10:30–11:00

Molar Incisor Hypomineralization: “A new Understanding of An Old Problem”
Speaker: Mona Al Sane

11:15–12:00

Endodontic Scolutions: Strategies for Endodontic Predictability and Profitability
Speaker: Gary Glassman

12:00–12:45

One Visit Reciprocating Endodontics: Safe, Predictable, Successfull
Speaker: Allan S. Deutsch

2:00–2:45

Changing the paradigm in anterior restorations: Composites vs. ceramics
Speaker: Eduardo Mahn

2:45–3:15

Silorane-Based Dental Composites (Past, Present & Future)
Speaker: Manal Mohamed Shira

3:15–4:00

Sinus Lifting Procedures: A Critical Clinical Review
Speaker: Christian Makary

4:00–4:45

Tibial Graft in Secondary Alveolar Cleft Reconstruction
Speaker: Anwar Al Khaja

4:45–5:30

Uses of Bone Expances in Managing Narrow Ridge and Soft Bone
Speaker: Ahmed HalimAyob

Wednesday, 2 February, 2011

AEEDC Conference Hall (Sponsored by Listerine)

9:00–9:30

Micro CT Forum Introduction
Speaker: Saud Orfali

9:30–10:15

What to do before scan and what to expect?
Speaker: Mr. Nagaraju Kunchapu

10:15–11:00

Microcomputed Tomographic Imaging in Periodontology
Speaker: Fawad Javed

11:15–12:00

Micro-CT Applications in Endodontics
Speaker: Emad Shwaimi

12:00–12:45

Micro-CT Analysis of Restorative Procedures and Outcomes: The 3-dimensional Truth
Speaker: Ziad Salameh

2:00–2:45

Impacted Canines
Speaker: Derek Mahony

2:45–3:15

Predictable Maxillary Molar Distalization in the correction of class II Malocclusion
Speaker: Ramesh Sabhlok

3:15–4:00

Uses of CBCT in Prosthodontics
Speaker: Ekram Ibrahim Hassan

4:00–4:45

Benign and Malignant Pathology of the Jaws:

A CBCT view

Speaker: Juan Yepes

4:45–5:30

The Current Role of Imaging in Assessing TMD Symptoms Using MRI and Cone Beam 3D
Speaker: Ghabi A. Kaspo

AEEDC Conference Hall IADT Symposium in Oral Traumatology

9:00–9:45

Dental injuries in pediatric patients
Speaker: Marie Therese Flores

9:45–10:30

Psychological management of young trauma patients
Speaker: Dina Debaybo

10:30–11:00, 11:15–12:00; 12:00–12:45

Oral presentation of Scientific Reports

2:00–2:45

Considerations in growing patients
Speaker: Lars Andersson

2:45–3:30

Autotransplantation of teeth in anterior region; why, when, how?
Speaker: Mitsuhiro Tsukiboshi

3:30–4:15

Implants in the anterior region
Speaker: Jan Gottlow

4:15–5:15

Dental Trauma Guide—an interactive web tool for diagnosis, treatment and prognosis
Speaker: Jens O. Andreasen

5:15–5:30

Awards to best Oral and Poster presentations
Concluding remarks
Speaker: Jens O. Andreasen

AEEDC Conference Hall (Sponsored by Pierre Fabre Oral Care)

9:00–10:00

Six vs. Four Handed Dentistry Utilizing Microscope
Speaker: MaciejGoczewski

10:00–10:30

Pain Management In Daily Dental Practice: Beyond Efficacy There Is A Need For Balance And Comfort
Speaker: Michel Brecx

10:30–11:00

Hypersensitivity Management in Dental Practice
Helme Altaee

1:15–12:00

Planning a customized smile design
Speaker: Christian Coachman

12:00–12:45

Invisible restorations with direct resin composites: a possible challenge?
Speaker: Simone Grandini

2:00-3:00

Routine anti-inflammatory care: solutions from natural origins
Speaker: Ben Salma

3:00-3:45

Temporomandibular Disorders: The Aspects Myofascial Pain, Pain Referral and the TMD Patient
Speaker: Ghabi A. Kaspo

3:45-4:30

Neurolinguistic Programming (NLP) For Dentists
Speaker: Ms. Beryl Comar

4:30-5:00

Photo-Activated Disinfection of Root Canal (PAD)
Speaker: Maryam Kuzekanani

5:00-5:30

After 15 years of NiTi in Endodontics: new approaches of design for better cleaning and shaping
Speaker: Jean Philippe Mallet

AEEDC Conference Hall (Sponsored by Colgate)

9:00-9:40

Implant Therapy: Simple Safe and Aesthetic
Speaker: Daniel Hess

9:40-10:30

Guided Bone Regeneration: Factors affecting the healing
Speaker: Nikos Donos

10:30-11:00

Reconstructive Surgery and Dental Implants: An Overview and Research Advancements
Speaker: Hani A. Salam

11:15-12:15

Dentine Hyper Sensitivity: New Management Approaches
Speaker: Fotinos S. Panagakos

12:15-12:45
