AAPD takes full advantage of Seattle location

Welcome reception features exclusive access to Space Needle, EMP Museum

Some of the top thought leaders in pediatric dentistry will be in Seattle May 21–24 for the American Academy of Pediatric Dentistry (AAPD) annual session.

Scientific sessions will be at the Washington State Convention Center, in the heart of downtown, adjacent to hotels, restaurants, nightlife and shopping. There are offerings for dentists, dental-team members and spouses. The AAPD is an ADA/CERP-recognized provider, with C.E. credit available on an hour-for-hour basis for most education sessions.

Taking advantage of the location, the welcome reception on Thursday, May 21, will include exclusive access to the Space Needle, EMP Museum and Chihuly Gardens.

The keynote, on May 22, features Frank Abagnale with “The True Story of Catch Me If You Can.” An authority on forgery, embezzlement and secure documents, Abagnale became an expert of sorts 40 years ago as a world-famous con man, as depicted

ed in his best-selling book, “Catch Me If You Can.” Leonardo DiCaprio and Tom Hanks starred in a Steven Spielberg film based on the book.

Three-day exhibit hall

Products and services in the meeting’s exhibit hall will be geared toward pediatric dental practices. The main AAPD booth (No. 517) will have a bookstore, which will have copies of the Handbook of Pediatric Dentistry available as a souvenir from this year’s annual session. Also in the AAPD booth you can get an update on the evidence-based dentistry guidelines and other EBD resources.

Also in the exhibit hall will be the Healthy Smiles, Healthy Children Donor Lounge, where you can learn more about Access to Care Grants and donate to the cause’s supporting foundation.

A hospitality area on the exhibit hall floor for all three mornings will offer a continental breakfast as well as complimentary beverages each morning and afternoon. Lunches will be for sale on Friday and Saturday. The exhibit hall hours are 9 a.m. to 5 p.m. on Friday and Saturday and from 9 a.m. to noon on Sunday.

Conference app

The 2015 AAPD event app includes a complete list of sessions, speakers, exhibitors, local attractions, facility maps and more. View the link posted on the AAPD website for the mobile website for Blackberry users or download the app from the Android Marketplace or the App Store.

A dedicated "Poster App" also will be available in the App Store in May. It will include all of the meeting's full-color posters from the "My Kid's Dentist Poster Research

Competition" in addition to the abstracts — enabling you to sort by topic, track, day and presenter's research.

EMP Museum, Space Needle, Chihuly Gardens ... and 'Star Wars' costumes

With the Seattle Center as the site of the welcome reception, attendees will be able to wander through three separate venues. You can catch the views from the Space Needle observation deck and admire the intriguing glass artwork in the Chihuly Glass and Gardens Museum. And there is far more than just rock 'n' roll in the EMP Museum, including the traveling Smithsonian exhibit of original costumes from the "Star Wars" movies, "Art, Rebel, Jedi, Princess, Queen: Star Wars and the Power of Costume."

You can register for the meeting online by visiting www.aapd.org/annual.

JDIQ courses in French/English

The Journées Dentaires Internationales du Québec, Canada's largest bilingual dental meeting, according to organizers, is from May 22–26 (Friday through Tuesday) in Montréal. Online registration is available at www.odq.qc.ca.

Meeting apps for Apple and Android phones and tablets can be downloaded through www.odq.qc.ca, the App Store or the Play Store. On-site at the meeting, free WiFi will be available to all delegates and exhibitors at the venue, the Palais des congrès de Montréal.

The meeting's educational program has more than 125 prominent speakers from Canada, the United States and Europe presenting approximately 175 edu-

ational sessions in English and French during the five-day convention.

Among the educational sessions: "Lights, Camera, Action! Patient Photography Made Easy — A Hands-On Workshop," "Endodontics for General Dentists: Advanced, Comprehensive and Practical Hands-On Training," "Oral Surgery for the General Dentist: Faster, Easier, and More Predictable" and "Hands-on Infection Control Workshop." Many other lectures and workshops are scheduled, with details in the program online.

225 companies, 500 booths

The exhibition hall will feature more than 225 companies in 500 booths in the

133,563-square-foot space.

More than 2,000 company representatives will be on hand in the exhibit hall to help dental professionals see, compare and make decisions on new furniture, equipment, instruments, techniques and other products and services — all under one roof.

The exhibition hall hours are 8 a.m. to 6 p.m. on Monday, May 25, and 8 a.m. to 5 p.m. on Tuesday, May 26.

The organizers invite you to join the more than 12,000 expected delegates to meet, learn, share and enjoy this gathering of friends and colleagues.

AGD adds C.E. tracks to meeting

At AGD 2015, from June 18–21 in San Francisco, the Academy of General Dentistry (AGD) intends to not just embrace "constant change," but celebrate it.

The meeting, at the Moscone West Convention Center in San Francisco, will showcase new technologies and C.E. courses for dentists and staff.

Keynote speaker Terry Jones, founder of *Travelocity.com* and *Kayak.com* and executive chairman of Wayblazer, will share insight on creating a culture of innovation and embracing opportunities in today's age of information. The presentation is sponsored by Colgate.

Innovation in the exhibit hall includes "Modern Practice for Today's Patients" presented by Henry Schein Inc. The display invites attendees to imagine the possibilities of a technologically enhanced office space. Visitors will be able to try out cutting-edge equipment, use patient management software and see esthetic options for transforming a practice space.

Clinical and research e-poster presentations feature captivating digital displays by today's dental students and residents presenting ideas for shaping the dental landscape of tomorrow.

New C.E. tracks will enable dental team members to focus on specific subject areas, such as endodontics, implants and special-patient care. Also new will be a 90-minute live-patient dental implant course hosted by Engel Institute founder Todd B. Engel, DDS, and fundamental and intermediate Invisalign® courses for dentists and their teams.

Friends and family can attend the "President's Celebration to Honor Fellows and Masters" for dining and live music and the AGD Foundation's "5K Fun Run/Walk" for oral cancer awareness and research.

Register at www.agd2015.org. The official hotel is the San Francisco Marriott Marquis. Early reservations are encouraged, at resweb.passkey.com/go/AGD2015, (877) 622-3056 or (415) 896-1600.

Digital radiography that seems designed for pediatric practices

By William F. Waggoner, DDS, MS,
Pediatric Dentist, Las Vegas

Is there a technology you've come to rely on so much that you can't imagine how you ever got along without it? For me, that technology is digital radiography with flexible wireless sensors.

When I first started private practice, we used film radiography exclusively. After a few years, we invested in a wired digital sensor system. It didn't take long to realize that a large number of children, especially the young ones, couldn't tolerate the hard sensors. So, after a few months, we went back to film. For the next several years, I never gave it much thought, other than when my staff would complain about having to clean the chemical processor.

About eight years ago, however, I discovered and invested in ScanX phosphor storage plates — now more commonly called flexible digital sensors — for our two offices. Manufactured by Air Techniques, the small, soft, flexible, wireless ScanX sensors are comfortable for any pediatric patient who can tolerate a film radiograph, unlike hard sensors.

Recently, Air Techniques introduced the ultra-compact ScanX Swift, which I obtained for a third pediatric office that we just opened. Here are 12 advantages I have come to appreciate about ScanX in general, and this new Swift model in particular:

1) *Excellent image resolution.* ScanX images enhance your case acceptance by helping you show the patient's parent the extent and location of any problems.

2) *Faster image processing.* All ScanX models process images in literally seconds, a mere fraction of the time it takes using film.

3) *Larger image area.* The image area with ScanX is up to 38 percent larger than with a wired sensor. This makes you much more likely to capture the complete coronal-to-apical length and not miss a root apex or distal cusp, which means fewer retakes.

4) *Easy image manipulation.* Brightness and contrast can easily be manipulated, and areas of the film can be magnified for better viewing and diagnosis.

5) *Same placement technique as film.* ScanX digital sensors are placed in the patient's mouth just as X-ray films are.

6) *Easy software integration.* ScanX

software integrates easily with most imaging software.

7) *Less radiation.* With ScanX, the X-ray exposure can typically be 80-to-85 percent less than that required for film, which is something your patients' parents will appreciate.

8) *Quick image review and saving.* When you view the scanned image, within seconds you can determine if you've captured the desired image. With a couple of keystrokes, you can then save the image into the patient's electronic chart.

9) *Digital storage and transmission.* Electronic charts eliminate the need to store X-rays in bulky manila files and space-hogging file cabinets and allow instantaneous transmission through email.

10) *No chemicals.* With ScanX you don't have to deal with and pay for costly film packs and messy chemicals, or deal with the hassle of chemical disposal.

11) *Affordability.* ScanX sensors are a fraction of the price of hard sensors and can be reused hundreds of times. There's also no need for costly insurance or annual maintenance.

12) *Chairside compatibility.* The compact size of the ScanX Swift processor makes it perfect for chairside use or for placement

ScanX sensors are 30 times thinner than wired sensors, so they'll fit even the smallest mouth. Retakes are easy because of the speed with which images are scanned and available. Photo/Provided by Air Techniques

just about anywhere in the office.

If I had to pick the most important advantage of using the ScanX Swift, it's the fact that its sensors can be used with 100 percent of the children who can tolerate regular film X-rays. ScanX sensors are 30 times thinner than wired sensors, so they'll fit even the smallest mouth. If you ask my staff, however, their favorite advantage of the ScanX Swift would probably be the fact that the images are scanned and available so quickly, so if a retake is needed, they know it almost immediately.

If you explore digital radiography with flexible wireless sensors, I'm confident that you too will soon be wondering how you ever got along without it.

Planning for partial retirement can be tricky

By Nicholas Spanakis, Group Practice
Manager, PNC Bank

If you want to keep working, only on a less demanding schedule, you're not alone. Many people these days are considering a "partial retirement." According to a University of Michigan study, 20 percent of those ages 65 to 67 consider themselves partially retired, while in 1960 this group was nonexistent.¹

The reasons for this trend vary: Some partial retirees need to prolong income to support their lifestyle, but others simply enjoy their work and don't want to stop.² Can you participate in this trend? Possibly — but it takes planning. To help you clarify your goals and how to reach them, consider drafting a partial retirement plan.

Having a 'planned duration' helps

The process of retiring, especially partially, is complicated for dental professionals, largely because of their practices. If you're the owner of a private practice, a partial retirement must be planned well in advance, and generally is more successful if there is a planned duration.³ But whether you're negotiating with partners to scale back, looking for possible buyers to take over your practice or considering moving into an entirely different part-time job, planning is crucial.

Consider the following questions and discuss them with your business and life partners. Then share the answers with your accountant/financial professional.

• Do you want to change jobs, or stay at

Photo/Provided by www.dreamstime.com

the same job and reduce hours?

• Have you made a financial plan that takes into account the reduced compensation resulting from fewer hours?

• Have you spoken with your financial advisor to prepare for partial retirement?

• Have you communicated your plans to your life partner and your business partners?

Once you've discussed these questions with all the players, the next step is to sit down with your accountant or financial professional and draft an actual plan for your proposed retirement.

This plan should cover financial matters, including how much you expect to earn and how that will cover your living expenses; work responsibilities including scheduling, such as on-call hours, regular hours worked and patients taken on; the expected duration of this arrangement; how a change in work habits will affect the ownership of the practice; and a clearly stated plan for the eventual transition to complete retirement.⁴

All of the above goes double if you're in a solo practice and plan to eventually sell or hand down your practice to the next generation. Preparing a business for sale takes years if you want to get the best price, and both you and your patients will benefit from long-term planning.

Be the first to see the ‘Visible Difference’

Designs for Vision is introducing a 3.5x expanded-field dental telescope that can be used all day, the Micro 3.5ef Scopes. The Micro 3.5ef Scopes uses a revolutionary optical design that reduces the size of the prismatic telescope by 50 percent and reduces the weight by 40 percent, while providing an expanded-field, full-oral-cavity view at 3.5x magnification.

“We listened to dentists who wanted the field of view of an expanded-field 3.5x telescope, but were concerned about wearing them all day because of the size and weight,” said Designs for Vision President Richard Feinbloom. “Designs for Vision was started by my father, Dr. William Feinbloom, as an optical company in 1961 to design innovative head-borne optical devices, and the new Micro 3.5ef Scopes continues that tradition of optical innovation. We’re excited to be offering several new products this year, including our NanoCamHD™ loupe-mounted video camera, and two new frames: Nike® Retro and DVI Sport frames.”

Designs for Vision’s new NanoCamHD records digitally at 1080p high-definition resolution. The NanoCamHD records magnified HD images from the user’s perspective. The complete system includes 2.5x, 3.5x, and 4.5x lens systems to match the magnification dental professionals are already using — and providing a true user’s point of view.

As an added feature, still photographs can be taken from live video feed or during playback. Video or still images can be uploaded into a patient file, included in presentations or courses, or shared with a colleague or lab for collaborative consultations.

The NanoCamHD complete system includes a color-corrected ULTRA Mini LED Day-Lite® headlight. The combination headlight/NanoCamHD can be attached to your loupes or it can be worn on a lightweight headband.

The system also includes a foot pedal to enable hands-free operation of the NanoCamHD. Record/pause, mute/unmute and still photography are controlled by the operator hands-free via the foot pedal. For best results, combine the NanoCamHD with Designs for Vision’s dental telescopes — matching true magnification levels of 2.5x, 3.5x or 4.5x to produce the most realistic simulation from the user’s perspective.

Designs also is introducing two new frame offerings this year: The DVI Sport and the

Esthetic and functional treatment with implant-supported bar on an incongruous prosthesis carrier

Quick lab work creates complete-denture retention system on implants

By Carlo Borromeo, Dental Technician, Italy

Introduction

The patient, a 74-year-old female with an older, total prosthesis, asked us to improve esthetics and function of both the upper and lower prostheses. In the initial exam, we noticed a marked difference between the total upper prosthesis (all but ruined) and the lower total prosthesis (recently manufactured across four implants). We also saw im-

mediately that the prosthesis was incorrectly mounted, occupying too much space and leaving the teeth too exposed (Fig. 1).

After discussions with the patient, we agreed to remount both the upper and lower teeth to obtain optimal esthetic results and restore mastication function. Based on the specific demands of the case, we identified the best retentive-connection system to connect with the implants and provide the necessary over-structure, support and thickness.

Case planning

Impressions were taken to obtain vertical and centric dimensions. Once the design met the patient's need for improved esthetics and function, the dental technicians created vestibular and lingual silicon masks to guide the building of the structure and over-structure. Space availability was evaluated with teeth and implants position. These analyses enabled identification of the proper prosthetic treatment to choose.

A working model was placed under the

parallelometer to identify the proper insertion plan. Different aspects were evaluated: the horizontal line of the incisors, the occlusion line of the posteriors, the under spaces by the areas under the frontal ridge and the implants' angulation. Once the insertion plan was finalized, castable pivots were regulated with proper height and screwed, guided by the silicon mask. Next came creation of the castable bar by setting it — area-after-area — using resin to fix it at the external areas (Fig. 2).

Starting the sprue procedure

Once all the parts of the structure were connected, we regulated the areas over the implants using a two-degree bur. The technician then checked everything using the silicon masks (Fig. 3). After we confirmed that the bur met all our expectations, we started the sprue procedure. We proceeded with the fusion through a special press-fusion procedure.

Once it was verified that the bar respected all the desired characteristics, we continued with the spruing, directly on the model to avoid distortions during the cooling of the wax. We then proceeded with the melting, using the “die-casting” technique. We conducted a first test immediately after cleaning the coating (Fig. 4).

Delivery of finished artifact to completion of final prosthesis

The finished artifact was delivered to the clinic, where the necessary tests and radiographs were obtained. Once verified that all the parameters were correct and that the structure was passive, the bar was milled and polished at the lab. On the model, spaces were verified for the application of pipe cleaners. This same test would be conducted later in the patient's mouth (Fig. 5).

Using the silicon plaques, we built the superstructure directly on the bar, starting by positioning the containers of the caps. Castable boxes were applied onto those, always using the silicon plaques. After avoiding the undercuts with wax, we isolated the bar and the model and then built the superstructure using resin (Fig. 6). We removed it from the superstructure and pasted the retentions. Everything was set up to proceed with the spruing directly on the model (Fig. 7).

After the coating was melted off, precision and friction was verified using a revealing-paint on the bar. The teeth were applied with the aid of silicon masks (Figs. 8, 9). The containers of the clips continued to be replaced with pink caps.

Everything was delivered to the clinic for the final test. With the prosthesis back at the laboratory, wax fittings were converted to resin fittings and the superstructure was finished and polished (Fig. 10). After applying it again on the superstructure, undercuts were closed with some wax, and the resin was applied to the prosthesis (Fig. 11). All the components of the prosthesis were polished and delivered to the clinic for the final test (Figs. 12, 13).

Conclusions

With adequate components, retention systems on implants and readily available technical and clinical knowledge and resources on complete dentures, you can obtain excellent results in short work times, using both traditional systems and CAD/CAM.

CARLO BORROMEO founded Dental Laboratory Borromeo in Italy in 1988, specializing in the construction of prosthesis for implants using CAD/CAM. He collaborates with Nobel Biocare Procera, Dental Wings, Rhein'83 and other companies to improve his expertise with their materials. He is a highly published industry author and presents and participates in many dental lab courses and conferences.

AD

Pacific Dental Conference

Jeff Coil, DMD, MS, PhD, FRCD(C), FADI, FACD,
Diplomate, American Board of Endodontics

Course #1501
Efficient and Effective Endodontics
Saturday, May 30, 2015
8:00am to 4:30pm

James Kohner, DDS

Course #1502
Hands-On Gingival and Connective Tissue Grafting
Friday, July 17, 2015
8:00am to 4:30pm

Course #1503
Crown Lengthening Hands-On Surgical Workshop
Saturday, July 18, 2015
8:00am to 4:30pm

Watch for other summer Hands-On courses

Join us next year
March 17-19, 2016

Online registration opens
October 15th, 2015
