INTRODUCING THE LATEST ADVANCEMENTS IN BIOACTIVE MATERIALS

The NEW Predicta™ Bioactive products are the latest examples of new cutting-edge restorative materials from Parkell; a US-based Manufacturer with over 70 years of excellence in dental material manufacturing. Predicta™ Bioactive Bulk and Predicta™ Bioactive Core are dual cure, resin composites, that release fluoride, calcium and phosphate ions to stimulate mineral apatite formation and remineralization at the material-tooth interface. Predicta Bioactive materials deliver a unique combination of physical and chemical properties. They are dimensionally stable, with excellent strength, time-efficient handling, and optical characteristics close to those of natural teeth.

Predicta™ Bioactive Bulk

- Clinical Versatility: Indicated for Class I, II, III, IV, and V restorations.
- Unlimited depth of cure without any need for layering.
- Ideal thixotropic viscosity for easy cavity adaptation.
- Nano-filled for durability and optimized polishability for life-like aesthetic outcomes.

Predicta™ Bioactive Core

- Contains Zirconia for enhanced cuttability.
- Versatile non-slumping formulation ideal for post cementation and core build-up.
- High flexural strength for strong, stable cores that last and resist flexing.
- Highly radiopaque for easy identification.

Mineral Apatite Formation

SEM Analysis of Predicta™ Restorative Surface after 28 Days.

Left: Predicta Control, no SBF. Center: Predicta, 7 days in SBF. Right: Predicta, 28 days in SBF. SEM images courtesy of Håkan Engqvist, Uppsala University, Sweden.
