Advanced hands-on implant workshop

Four days of intense learning and training with Dr. Sascha Jovanovic

Online dental institute, Global Institute for Dental Education (gIDE), hosts four hands-on workshops per year at its training facility in Los Angeles. Topics covered include soft-tissue management and grafting around dental implants; bone, ridge and socket grafting; and sinus elevation and grafting.

This advanced implant and grafting workshop is a four-day hands-on clinical course developed by Dr. Sascha A. Jovanovic, a periodontist from Los Angeles and pioneer in implant dentistry, bone regeneration and esthetic procedures. Jovanovic is also the course director at UCLA CE, past president of the EAO, author of more than 60 scientific publications and one textbook, and is the editor in chief of Implant Tribune.

The next workshop is planned for June 15-18.

Clinicians can benefit from taking one, two or all four days at gIDE's Training Center. Day 1 is composed of an interactive lecture in the morning addressing flap design and management, suturing methods, soft-tissue autografts and allografts, abutment design modifications, perio-implant papilla support and more.

During the second half of the day, participants will practice on fresh porcine maxilla models with the latest implant designs, microsurgical hand instruments, filler materials, resorbable and non-resorbable sutures and dermal allograft.

The second part of the course consists of a two-day workshop covering the latest techniques for successful bone grafting in implant placement, esthetic implant procedures and socket grafting. Two live surgery cases will be demonstrated: a posterior case for ridge and sinus augmentation purposes, and an anterior esthetic case exhibiting optimal implant placement and site development. Participants will prac-

AO goes to Washington, D.C.

Photos/Humberto Estrada, Dental Tribune

Recognizing implant dentistry's global reach, the Academy of Osseointegration debuted an International Symposium to highlight clinical research, technology and treatment advances that may be unfamiliar to U.S.-based practitioners during the AO's 2011 Annual Meeting, which took place March 3-5, in Washington, D.C. For more pictures from the event, see **Page 2B**.

AAIP, Jamaican Ministry of Health offer implant education course in Montego Bay

The College of Health Sciences and the School of Oral Health Science, University of Technology, Jamaica, in conjunction with the American Academy of Implant Prosthodontics and the Ministry of Health, Jamaica, presented a hands-on dental implant conference and continuing education program called "Implants in Paradise," in Montego Bay, from Jan. 16-21. Held at Cornwall Regional Hospital, the course was the third cooperative effort of the Jamaican Ministry of Health and the American Academy of Implant Prosthodontics.

The six-day course was the fulfillment of a vision to establish a training program in oral implantol-

ogy in Montego Bay, with the pristine Jamaican white sand beaches providing the recreational backdrop. Drs. Leonard I. Linkow and Sheldon Winkler presented a series of lectures, and clinical treatment was performed under the supervision of Dr. Mike Shulman.

The conference began on Jan. 16 with an induction ceremony where Linkow and Winkler were conferred as adjunct professors, and Shulman was named an adjunct associate professor in the School of Oral Health Sciences, University of Technology, Jamaica. The Hon. Errol Morrison,

Dr. Mike Shulman demonstrates surgical implant procedure at Cornwall Regional Hospital during AAIP continuing education course. (Photos/Provided by AAIP)

NEW
PRODUCT!
miniMARK

TWO GREAT PRODUCTS. ONE *reMARKable* IMPLANT!

¹ *A trusted attachment.*

The first mini implant system with the world-renowned Locator® Attachment.

² *An effortless mini implant system.*

Restores dental function with a minimally invasive, same-day procedure.

Now it's possible for you to offer reliable, predictable miniature implants to your patients who are denture wearers, right in your own office. The **miniMARK™** Dental Implant System is an affordable option for denture wearers. Precision engineered by ACE Surgical, it features the renowned LOCATOR® Attachment by Zest Anchors—the world's most trusted name in securing implant-fixed dentures.

president of the University of Technology, Dr. Irving Fitzgodfrey McKenzie, interim dean of the School of Oral Health Sciences, and Dr. Winston E. Grey, adjunct associate professor at the School of Oral Health Sciences, were named honorary fellows of the American Academy of Implant Prosthodontics.

In attendance at the ceremony were the first year DMD students from the School of Oral Health Sciences. Participating in the hands-on course were clinicians from the United States, India, Thailand, Myanmar and 10 local Jamaican dentists. During the course, the participants placed 19 implants in 12 patients, performed five sinus-lift procedures, placed abutments and temporary

The Honorable Errol Morrison, at right, president of the University of Technology, Jamaica, presents an adjunct professor certificate to Dr. Leonard I. Linkow.

restorations and continued restorative treatment for patients who had implant surgery performed during the previous two courses.

Linkow developed and introduced numerous implant systems, many

of which are in use today throughout the world. In 1992, New York University created the first and only endowed chair in implantology in perpetuity with Linkow as the recipient. Linkow is considered by many of his colleagues as the "Father of Oral Implantology." He is clinical professor of implant dentistry at New York University College of Dentistry. He has authored 14 textbooks and almost 200 articles and guest chapters in professional journals and textbooks. Linkow is currently honorary president of the AAIP.

Winkler is adjunct professor at the School of Dental Medicine, Midwestern University, Glendale, Ariz. He previously served as professor and chairperson of the department of prosthodontics and dean of advanced education, research and continu-

ing education at Temple University School of Dentistry, Philadelphia, Pa. Winkler has authored or co-authored six textbooks (including "Essentials of Complete Denture Prosthodontics"), approximately 185 articles and chapters in professional journals and textbooks and founded the journal Implant Dentistry, which he edited for six years. Winkler is currently senior editor of the Journal of Oral Implantology.

Founded by Dr. Maurice J. Fagan, Jr., in 1982 at the School of Dentistry, Medical College of Georgia, the objective of the American Academy of Implant Prosthodontics is to support and foster the practice of implant prosthodontics as an integral component of dentistry.

The academy supports component and affiliate implant associations around the world, including organizations in Egypt, France, Jamaica, Jordan, Kazakhstan, Israel, Italy, Paraguay, Peru, Spain, South Korea and Thailand.

The academy has published two textbooks, "The Dental Implant" in 1985 and "Implant Prosthodontics" in 1990. The Journal of Oral Implantology is the official publication of the academy. The academy also publishes a newsletter.

The academy holds an annual convention, international meetings in cooperation with its affiliate and component societies, offers continuing education courses and sponsors a network of study clubs in the United States.

The American Academy of Implant Prosthodontics is designated an Approved PACE Program Provider by the Academy of General Dentistry. The formal continuing education programs of this program provider are accepted by AGD for fellowship, mastership and membership maintenance credit. The current term of approval extends through Dec. 31, 2013.

Officers of the academy are Winkler, Scottsdale, Ariz., president; Dr. Harold F. Morris, Canton, Mich., president-elect; Dr. Peter A. Neff, N. Palm Beach, Fla., vice president; Dr. Robert Wood, Philadelphia, Pa., secretary; and Dr. James Fagan, III, Atlanta, treasurer. Dr. M. Joe Mehranfar, Scottsdale, Ariz., is general chairperson of the 2011 annual meeting.

In a letter to the academy after the joint program, McKenzie, interim dean of the School of Oral Health Sciences, wrote, "On behalf of the University of Technology, Jamaica, and the people of Jamaica, I wish to express sincere gratitude to the American Academy of Implant Prosthodontics for this priceless act of kindness and humanitarianism that has exceeded our every expectation."

Future meeting, continuing education and membership information can be obtained from AAIP headquarters at 8672 E. Eagle Claw Drive, Scottsdale, Ariz. 85266-1058; telephone (480) 588-8062; fax (480) 588-8296; e-mail to swinkdent@cox.net. The AAIP website is www.aaipusa.com. **II**

Introducing
enCore™
COMBINATION
ALLOGRAFT

enCore™ Combination Allograft – the first allograft particulate bone grafting product **combining mineralized and demineralized bone in a single bottle**. Already a popular combination among many specialists, enCore™ leverages the complementary benefits of space-maintaining mineralized bone with osteoinductive demineralized matrix to optimize the environment for the regeneration of vital bone. **Patent pending.*

Representative histology taken at 6 months from a case using combination allograft.
Histology by Michael Rohrer, DDS, MS, University of Minnesota

86% vital bone, 14% residual graft
51% bone, 49% marrow

Osstell - the objective way to measure implant stability

Today, more implant patients ask for early loading. More patients less qualified for implants ask to be treated, too. And every patient wants the loading to be successful.

Correctly assessing implant stability is a key parameter in either situation.

Osstell ISQ is a measuring tool that does this for you – in an accurate and objective way. Even when osseointegration is well underway.

It helps you, the treating doctor, make optimal loading decisions. You quickly detect implants that aren't performing as expected and need more healing time (or even to be replaced).

By preventing premature loading, Osstell ISQ becomes a quality-assurance system for your clinic. It makes your treatment of challenging patients easier and more predictable – allowing you to treat more patients more successfully.

240 studies (on last count) and ten years of clinical experience around the world confirm the usefulness of Osstell ISQ.

Simply put, it lets you choose the best protocol for every patient. And track the performance of every implant – now, later and much later.

gIDE's online lecture library expands

As part of gIDE's mission statement, the Global Institute for Dental Education is dedicated to providing continuous new professional development surrounding the ever-evolving field of dentistry. gIDE publishes new Online Lectures bi-monthly filmed in-house with professional green screens and production equipment.

For its latest lecture on demand, "Oral Plastic Surgery," gIDE worked with an expert in restorative dentistry, Dr. Nelson Carranza. In many cases, especially in implant dentistry, the challenge still present today relies on soft-tissue management. Periodontal surgery is evolving to meet these chal-

lenges into a new concept termed "oral plastic surgery." Carranza filmed two versions of this lecture, in English and in Spanish.

Dr. Sam Strong, who has previously recorded nine lectures for gIDE, most recently contributed "Treating the Edentulous Arch with Removable Implant Overdentures." This presentation is the second of four modules related to treating the fully edentulous patient with removable overdentures. It focuses on the use of a jaw relation recording device (or tracing device), which gives the clinician new accuracy in procuring centric relation.

"The Emergency Implant Immediate Extraction Replacement" is the

newest lecture from Dr. Jack Hahn, a well-recognized pioneer in the field of implant dentistry. Immediate extraction replacement is an option applied when patients present themselves with an un-restorable tooth, especially in the esthetic zone where they want something that will allow them to engage in social situations without a missing tooth.

gIDE has published more than 200 lectures online, while constantly adding new and innovative content. Access to these lectures is available through DVD purchase, but gIDE's lecture library is most conveniently utilized via the online membership. Yearly subscription to this compre-

hensive library provides instant access to scientific knowledge in the fastest growing segments in dentistry. gIDE is ADA certified and offers a growing number of up to 200 continuing education credits.

Founded in 2003 by world-renowned implant dentist, Dr. Sascha A. Jovanovic, and colleagues, gIDE is a private dental institute blending online digital education with hands-on learning, dedicated to the advancement of clinicians and the healthcare of their patients worldwide. For additional information regarding gIDE's lectures on demand and additional benefits of the membership, visit www.gidedental.com or call (310) 696-9025. 

Dr. Sascha Jovanovic

tice tooth extraction with simultaneous implant placement and bone grafting with membrane placement on mandibular pig jaw models. Each workstation is equipped with an implant drill unit, dental implants, fresh pig jaw model, hand instruments, bone-filler material, membrane, BMP-2 graft, titanium mesh and fixation pins.

Sinus elevation and grafting are the topics for the final part of this all-encompassing clinical course. A critical viewing of biological and clinical aspects of sinus elevation techniques, including the key elements for implant success, will be presented. Participants will practice lateral window approach, internal sinus elevation using Osteotome techniques and more on fresh goat maxilla models.

Dr. Leopold Weinstein, a general practitioner from Camarillo, Calif., commented, "Dr. Jovanovic offers the most complete and comprehensive program on bone, ridge and socket grafting."

A periodontist from Cerritos, Calif., Dr. Phil Melnick said, "This one-of-a-kind sinus hands-on course raised my confidence level and success rate in sinus bone grafting and has expanded my overall expertise in these important procedures that I now perform regularly."

AD

NobelActive™

A new direction for implants.

Dual-function prosthetic connection.

Built-in platform shifting.

Bone-condensing property.

High initial stability, even in compromised bone situations.

Adjustable implant orientation for optimal final placement.

NobelActive equally satisfies surgical and restorative clinical goals. NobelActive thread design progressively condenses bone with each turn during insertion, which is designed to enhance initial stability. The sharp apex and cutting blades allow surgical clinicians to adjust implant orientation for optimal positioning of the prosthetic connection.

Restorative clinicians benefit by a versatile and secure internal conical prosthetic connection with built-in platform shifting upon which they can produce excellent esthetic results. Based on customer feedback and market demands for NobelActive, the product assortment has been expanded – dental professionals will now enjoy even

greater flexibility in prosthetic and implant selection. Nobel Biocare is the world leader in innovative and evidence-based dental solutions. For more information, contact a Nobel Biocare representative at 800 322 5001 or visit our website. www.nobelbiocare.com
