• ASM18 features more than 330 exhibitors and 90 speakers against the backdrop of Toronto's world-class dining, shopping, arts, culture and entertainment offerings. (Photos/ Provided by Metro Toronto Convention Centre)

## Two days of exhibits anchor three days of education

■ Welcome to ASM18, the Ontario Dental Association's Annual Spring Meeting. You're in good company. As one of the largest and most respected dental conventions in North America, this conference and trade show attracts more than 13,000 dental professionals from across Canada, the United States and internationally to learn, network and share best practices.

The meeting includes three days of education and a two-day trade show

# Keynote themes: Removing barriers, looking forward

■ The keynote speaker at this morning's opening ceremonies, 8–9 a.m. in Hall F, 800 Level, is Rick Hansen, best known as the "Man in Motion" for an epic two-year circumnavigation around the world in his wheelchair, completed 30 years ago. Paralyzed from the waist down in an injury at age 15, the Canadian icon has dedicated his life to creating a world that is accessible and inclusive for all. He is a four-time world champion, nine-time Pan Am gold medalist and three-time Paralympic gold medalist.

Tomorrow's keynote speaker, 8–9 a.m. in Hall F, 800 Level, is Jim Carroll, one of the world's leading futurists on trends and innovations. Carroll links future trends to innovation and creativity. He provides independent guidance to a diverse global client base.

## ASM18 *\*from page 1*

that includes two complimentary cocktail receptions.

In the days ahead, more than 90 internationally renowned speakers will cover a broad and diverse range of clinical, practice-management and personal development topics. The exhibit floor features more than 330 companies and organizations offering a wide range of new dental products, services and leading-edge technology for you to test and compare.

The lectures, workshops and exhibits target dentists, dental hygienists, dental assistants and all other members of a practice's staff.

## New at ASM18

This year's meeting has a number of new complimentary services on the exhibits floor, including handwriting analysis, hearing testing and a healthy eating zone.

Booth No. 121 features handwriting analysis by Elaine Charal, who is equipped to uncover secrets contained in your handwriting that may surprise you.

You can stop by booth No. 142 for a complimentary hearing test, provided by HearingLife, which has 200 hearing health-care clinics across Canada.

In the Healthy Eating Zone, booth No. 2212, you can sample a variety of recipes from Rose Reisman, who has enlightened, entertained and uplifted Canadians with her healthy recipes

• Host site of ASM18, the Metro Toronto Convention Centre is filled with indigenous artwork, including this terrazzo flooring.

for more than two decades. Reisman has written 19 books, which feature more than 2,000 recipes and cover the areas of chronic disease prevention, weight management, career stress and nutrition trends. She will be in the booth for both days of the exhibits.

## Visit the ODA booth

Attendees can visit the ODA booth (Level 800, just outside the exhibits floor) to learn how to take full advantage of all of the benefits that come

with ODA membership. Staff from the ODA and Canadian Dental Association are in the booth to answer questions about interpretation and use of dental procedure codes; compliance and regulatory issues; continuing education programs; ODA Extended Health Care Insurance (EHC); the ODA Member Discount Program; subscribing for CDA Secure Send; and how to become more involved in your component society.

# Headlights: Now in high-definition

By Designs for Vision Staff

■ Designs for Vision is introducing an advanced photonic design that provides uniform light distribution with maximum intensity.

The patent-pending headlights optically focus the light from the LED to provide 45 percent more light with uniform distribution.

The new LED DayLite® Micro HDi™ combines the new high-definition imaging with a very lightweight headlight in combination with the new Micro power pack, according to the company, which says the Micro power pack is the lightest and smallest available. The complete unit includes two power packs, and each power pack can run up to 10 hours.

Designs for Vision has also added the high-definition imaging to LED DayLite WireLess Mini HDi, providing a lightweight, cordless solution with light intensity comparable to many corded headlights. You can choose high-definition imaging with

The new HDi headlights from Designs for Vision can provide up to 45 percent more light with uniform distribution. (Photo/Provided by Designs for Vision)

either a wired or wireless design to meet your preference, and all HDi headlights will illuminate the entire oral cavity.

Designs for Vision's WireLess headlights free you from being tethered to a battery pack. The simple modular designs uncouple the headlights from a specific frame or single pair of loupes.

Prior technology married a cord-

less light to one pair of loupes via a cumbersome integration of the batteries and electronics into the frame.

The compact design of the LED DayLite WireLess headlights are independent of any frame/loupes.

In addition, Designs for Vision is also featuring the REALITY 5-star rated The Micro 3.5EF Scopes, which utilize a revolutionary optical design that reduces the size of the prismatic

## Here in Toronto

You can see the Visible Difference® yourself by visiting Designs for Vision's booth, No. 433, or contact the company to arrange a visit in your office by calling (800) 345-4009 or emailing [info@dvimail.com](mailto:info@dvimail.com).

telescope by 50 percent and reduces the weight by 40 percent while providing an expanded-field, full oral cavity view at 3.5x magnification.

Building on the award-winning design, the newest addition to the Micro Series line is the Micro 4.5EF Scopes. These scopes reduce both the size and weight of the telescopes by 44 percent.

Designs for Vision has expanded into a new 67,500-square-foot location at 4000 Veterans Memorial Highway in Bohemia, N.Y.

You can visit [www.DesignsForVision.com/move.htm](http://www.DesignsForVision.com/move.htm) to check out some photos of the new facility.

# A revolutionary paradigm shift in dynamic surgical navigation

**‘It has streamlined and simplified the workflow in both the diagnostic and surgical phases’**

By George Mandelaris, DDS

■ A revolution in surgical guidance is afoot. A new dynamic navigation technology called “Trace and Place” (TaP for short) was developed by ClaroNav and will soon become available with its Navident system. I have had the opportunity to try the technology in a range of cases, and I am very impressed. Here’s a brief description of my experience.

Registration is accomplished using any recent CT scan of the jaw by selecting on-screen and then tracing three of the patient’s teeth or other structures (such as braces or abutments).

The process is done in the chair, immediately before surgery. No stent or guide needs to be prepared, and the entire registration process is typically accomplished in about three minutes.

## If needed, the registration can be immediately repeated

In the rare case something goes wrong during registration and an accuracy check fails to demonstrate the accuracy expected, the registration can be immediately repeated by tracing the same or other structures.

Once the jaw is registered with its CT scan, on-screen guidance of

the drill position and orientation is provided. The jaw surface is fully exposed, just like with free-hand drilling.

Because the jaw often moves during the operation, the system continuously tracks the position of the jaw and adjusts the registration to keep the jaw and its on-screen image in accurate alignment.

Tracking the upper jaw is accomplished using a special head-tracking frame, which is not affected by movements of the lower jaw or changes in facial expressions.

Tracking the lower jaw is accomplished by connecting a lightweight plastic “jaw tracker” part, marked with optical targets, to a single tooth using a light-cured composite.

The motions of the drill are tracked using another plastic part marked with optical targets.

After only a short experience with Trace and Place technology in my practice, I have come to believe that it is a real tipping point for dynamic navigation guidance.

It has streamlined and simplified the workflow in both the diagnostic and surgical phases to allow state-of-the-art technology to be an everyday component of my surgical implant practice.

I can’t imagine going back!

# Award-winning bioactive restorative material achieves functional, life-like aesthetics and simplifies procedures

By Shofu Dental Staff

■ A bioactive, direct restorative composite indicated for all cavity classes, I–V, Beautifil II LS provides general practitioners with the means to reduce volumetric shrinkage and shrinkage stress while creating predictable and functional aesthetics.

This novel material incorporates Shofu's proprietary biomimetic Giomer technology, clinically proven in 8- and 13-year recall studies to release and recharge fluoride to help inhibit plaque formation and establish a stable pH in the oral environment.

According to the company, Beautifil II LS, 83 percent filled by weight, demonstrates excellent compressive (364 MPa) and flexural strength (117 MPa), maintains ideal color stability, and polishes in less than 15 seconds, producing a durable, life-like sheen (78 gloss units).

Other distinct features of Beautifil II LS include the material's low-shrink attributes, volumetric shrinkage of 0.8 percent and polymerization shrinkage stress of 2.7 MPa, which present the lowest values among all universal composites in dentistry today, according to the company.

## Independently rated 'excellent'

Featured in a new edition of the Clinician's Report, Beautifil II LS was rated "excellent" and placed among the top five universal composites, leaving behind 16 competitors. Also recently, Beautifil II LS received from the Dental Advisor a 95 percent clinical approval rate and the coveted Editor's Choice Award for the best direct universal restorative of the year.

Available in syringes, tips and two value kits, in 14 dentin and enamel shades, Beautifil II LS offers clinicians predictable and functional aesthetics with greater strength, higher wear resistance and unmatched polishability and luster, the company reports.

• Functional and naturally beautiful restorations created with Beautifil II LS. (Photos/Frank J. Milnar, DDS, AAACD)

• Beautifil II LS: Lowest volumetric shrinkage (0.85 percent) and shrinkage stress (2.72 MPa); greater strength and higher wear resistance; tooth-like esthetics with natural fluorescence and chameleon effect; polishes in an instant; and sustained fluoride release/recharge with bioactive Giomer chemistry. (Photos/Provided by Shofu Dental)

## Here in Toronto

You can visit Shofu in booth No. 419 to learn more about how Beautifil II LS (Low Shrink) reduces polymerization shrinkage and shrinkage stress while creating predictable and functional esthetics.

# Introducing Navident 2.0 for Dynamic Navigation with Trace and Place (TaP)

"Trace and Place is one of the most astounding pieces of technology I have ever seen. It is a revolution in guided surgery. Much faster to use than static guides and you have the ability to easily make changes during surgery if needed."

The workflow for static guided surgery involves dental scans, intraoral scans and STL files, merging them, designing the case, printing, curing, washing and sterilizing the guide. With trace and place the workflow is much simpler: take a scan, plan the case, trace the teeth to align the scan with the patient's anatomy and place the implant. It gives the best of both worlds. The minimal time of an unguided case and the accuracy of a guided case. It's a game changer."

David R. Scharf, DMD
